

OUR STORY

The adventure began in the early 1990's when our founder, Art Kubach was on a mission for our A & D customers, seeking alternatives to real wood veneer. Approached by a women's clothing retailer to solve the chipping issues of plastic laminate, Art found a thermofoil film perfectly matching the customers plastic laminate. Art discovered super realistic embossed films that recreate the beauty of real wood. The issues of chipping for the retailer were solved. During the years that followed, the richness and variety of the films has grown. Today Spectrim is one of the largest users of thermofoil films in our industry. The beauty of our faux wood finishes provide architects and designers a solution that is beautiful, warm, comforting and provides a healing environment. In addition, it is impact and scratch resistant, cleanable even with bleach, and sets your design apart from the rest. Healthcare facilities, hotels, education and government systems have found our products to help enhance the experience and improve their bottom line.

CASE STUDY

The use of Ven4ma® for Benjamin Russell Hospital is a testament to the versatility and capability of Spectrim. With one million square feet used throughout, Iris Dates with HKS - Dallas was able to create an award winning design that provides for a durable, beautiful and high impact-resistant solution. "We used SpecTrim Ven4ma® wall protection throughout the Benjamin Russell Hospital for Children project. It was meant for wall protection, but the wood visual is so authentic that it looks like we used real wood everywhere. It warmed the space and provided much needed wall protection. HKS was very happy with the results as was the owner." -Iris Dates

"This project more than any other exemplified the collaborative process when Architect, Designer and Spectrim work together to achieve a goal. HKS had a design in mind that proved challenging to achieve without the creative talent at Spectrim. By working together we were able to achieve their design and work with multiple mill work houses to achieve the desired results. The result is over 1 million square feet of Ven4ma® used in every area of the facility in different and eye stopping ways. The big win will be obvious in the future when the facility will look much as it did at the grand opening because they chose to use high impact wall protection that gives the look and warmth of real wood."

OUR PRODUCTS

Ven4Ma® Wall Protection

Flexible enough to be used on organic shapes, yet impact and scratch resistant for the toughest environments. With Ven4ma you can have the beauty of veneer without the cost. Multi-layered, Class A fire-retardant .040" thick sheet utilizing decorative thermofoil films. Available in 4' x 8' & 4' x 10'.

Ven4ma® Wainscot

Clean and low profile Ven4ma Wainscot creates a contemporary look to match modern décor. Mix and match to create a stile and rail wainscot or use contrasting color for a two-toned effect.

Shiplap

The shiplap look is hot yet wood options do not offer the durability required of commercial spaces. With our alternative, numerous finish options are combined with needed scratch, abrasion, chemical and UV-resistance.

Moldings

We have a fondness for our moldings as they were the first product to be created with our wrapping technology. Pre-finished, decorative and protective thermofoil films wrap the moldings and emulate wood at a fraction of the cost. Custom profiles can also be created.

Handrails, Crashrails, & Corner Guards

Healthcare facilities need products that can withstand the harshest of environments. Spectrim's Handrail, Crashrail & Corner Guard covered in rigid thermofoil film offer exceptional impact resistance and beautifully matched end caps. Designed for high impact areas, the products help prevent torn wall covering, chipped paint and gouged corners.

Wall Panels

Our wall panels combine gorgeous finishes with high durability. The 3D laminate variety combines beautifully shaped edges with seamless wrapping in thermofoil. Fused edge panels offer an air tight alternative with no seams. Therefore, there is nowhere for bacteria to collect.

Traditional Wainscot

Our pre-finished Wainscot system of trims and panels, provides the warmth and look of real wood at a fraction of the cost. The beauty of wood is combined with the durability of wall protection.

Customization

Being the leader in the use of thermofoils has its advantages. With little to no minimums the process can be as simple as matching an existing laminate finish. Our customization, however, does not stop there. The possibilities are endless including custom moldings, panels, fluted pilasters, acoustical panels, cabinet components and elevator panels. Consult your Spectrim Representative to understand more about our customization.
